## Denison Consulting Group Introduces Industrial-Grade Compressor Solution

[Denison Consulting Group](#), a woman-owned energy management, engineering and information technology consulting firm, introduces a new managed solution to monitor and manage industrial-grade compressors in real time. The managed solution converts data into actionable information in order to provide valuable insights for large industries such as oil and gas, and food and beverage industries, which commonly use industrial-grade compressors.

Built on decades of experience in designing and implementing complex and secure network solutions, Denison Consulting group leverages its knowledge of operational technology (OT) and information technology (IT) to help its global customers become more cost effective and competitive in their space while realizing greater return on investments.

The firm's robust industry knowledge enables it to help clients seamlessly implement, manage and monitor their operations remotely. This provides them with continued surveillance and reporting functionality for greater efficiency.

"We are actively enhancing this service using the same flexible platform to allow for even deeper insights into the management of compressors and other industrial assets," said Vishy Narayan, CTO of Denison Consulting Group, who was previously a Principal Architect for one of the world's largest solutions and consulting companies.

"With the knowledge, experience, and ability to collaborate with our technology partners, our firm is uniquely positioned to quickly deliver cost-effective, scalable, industrial-grade solutions that give clients an edge over their competition," says Dianne Denison Atkinson, CEO of Denison Consulting Group.

Denison Consulting Group is hosting a webinar on December 21, 2016 from 10:00 -11:00 am Central Time, affording industry the opportunity to experience a demonstration of the managed solution, learn about the firm's upcoming innovations, and speak directly with the CTO.
